

What is a Data Quality Score? How is it calculated?

Statistical Checks

An Anganwadi Centre is flagged if a substantial portion of their children's data across several months shows:

1. Persistent Copying
2. Same Increment for same child
3. Blanket Increment across children
4. Abnormal Z-Score Transitions
5. Borderline Clustering

Each Anganwadi center is categorized into red, yellow, green based on how many checks flag them:

Red - % of checks flagged is > 30%

Yellow - % of checks flagged is between 1-30%

Green - % of checks flagged is 0%

Score Logic & Rationale

Calculation Method

The checks are run on the back end and flags are averaged, but to the user only the 3 color status is seen.

Why Evaluate All Checks?

If focus were placed on just one check, evidence suggests that behavior might simply move from one kind of misreporting to another.

Future Iterations

Methodology will be upgraded to:

1. High Weightage Indicators

(Given effect on child's care)

- Same increments
- Abnormal Z-score Transitions
- Borderline Clustering

2. Low Weightage Indicators

- Copying
- Blanket Increments

3. Additional Checks

- Implausible measurements
- Digit preference

The background is a collage of four photographs. Top-left: A woman in a red and orange sari sits on a patterned floor with two young boys, serving food from a plate. Top-right: A woman in a green sari sits on the floor with two young boys. Bottom-left: A child in a pink school uniform sits on the floor, eating from a plate. Bottom-right: Two young girls in pink school uniforms stand together, smiling at the camera. A central white rounded rectangle contains the text.

Each DQ Check

Understanding (1) Persistent Copying check

Disclaimer

An AWC is flagged if 30% of children or more are found to have same value of weight or height recorded for min 3 consecutive months

Child Code	2026-02	2026-03	2026-04	2026-05	2026-06	2026-07
0214718bc95b34748e49	83	83	83	85	85	85
1bab54333437df94fc1a	78	78	78	85	85	85

df5e675cda6f688f9825	10	10	10	10.2	10.2	10.2

Understanding (2) Same Increment and (3) Blanket Increment checks

Same Increments
An AWC is flagged if more than 30% of its children show the same month-to-month increment in height or weight, at least four times in a row

Child Code	2026-02	2026-03	2026-04	2026-05	2026-06	2026-07
0fde6d60b a289a72c0 08	12.2	12.4	12.4	12.6	12.8	13
22ea3650d df11b64e7 c2	10.1	10.3	10.3	10.5	10.7	10.9
3102f5e8b 9e61af8e7 6c	11.4	11.6	11.6	11.8	12	12.2
a366a25d0 23020a960 8c	16.2	16.4	16.4	16.6	16.8	17

Blanket Increments
An AWC is flagged if more than 50% its children show the exact same month-to-month increment in height or weight, at least once

AWC Code	Month (Before)	Month (After)	Weight (kg)			Height (cm)		
			Before	After	Increment	Before	After	Increment
21373020908	Jun	Jul	9.6	9.7	0.1	79	80	1
			9.5	9.6	0.1	79	80	1
			13.6	13.7	0.1	101	101	0
			13.5	13.6	0.1	101	101	0
21391030802	Jun	Jul	8.2	8.3	0.1	74.6	74.7	0.1
			11.3	11.4	0.1	81	82.2	1.2
			8.5	8.6	0.1	74	74	0
			8.3	8.4	0.1	74.2	74.4	0.2

Understanding (4) Abnormal Z-Score Transitions check

An AWC is flagged if more than 30% of its children show a month-to-month change greater than 1.5 in height-for-age (HAZ), or 1.0 in weight-for-age (WAZ) or in weight-for-height (WHZ). A child's nutritional z-scores is an indicator of growth status relative to a healthy reference population; abnormally large changes indicate implausible gains or losses in growth

HAZ Transitions 6 24 children flagged in AWC							
Child Code	Feb-26	Mar-26	Apr-26	May-26	Jun-26	Jul-26	Pattern
dc795bf43af4b4...	-2.87	-2.96	-3.06	-1.50	—	—	+1.56
8b1fcc232e3cec4...	-2.91	-3.04	-2.65	-0.53	-0.63	-2.08	+2.12
2185507b65d208...	-3.14	-2.72	-2.91	0.57	0.52	0.27	+3.48

WAZ Transitions 1 children flagged in AWC							
Child Code	Feb-26	Mar-26	Apr-26	May-26	Jun-26	Jul-26	Pattern
0534ad81cdb91b0...	-0.93	-0.94	-0.96	-0.98	-1.97	-0.07	+1.90
47992d90a5f6c8a...	-1.72	-1.69	-1.73	-1.78	-2.65	-0.09	+2.56
8353c76a38ee33...	-1.41	-1.30	-1.25	-1.22	-3.51	-0.11	+3.40

A child's height increases by **7 cm** in one month when ideally children that age can only grow **0.7cm** for her age

HAZ Transitions							
Child Code	Feb-26	Mar-26	Apr-26	May-26	Jun-26	Jul-26	Pattern
dc795bf43af4b4...	-2.87	-2.96	-3.06	-1.50	—	—	+1.56

WHO Child Growth Standards: height-for-age, GIRLS, 2 to 5 years (z-scores), height in cm

Month (age)	-3 SD	-2 SD	-1 SD	Median	+1 SD	+2 SD	+3 SD	Child*
Feb (36)	83.6	87.4	91.2	95.1	98.9	102.7	106.5	84.1
Mar (37)	84.2	88.0	91.9	95.7	99.6	103.4	107.3	84.3
Apr (38)	84.7	88.6	92.5	96.4	100.3	104.2	108.1	84.5
May (39)	85.3	89.2	93.1	97.1	101.0	105.0	108.9	91.2

+6.7 cm

in ONE month (Apr to May)

- Apr: 84.5 cm, below -3 SD (severely stunted)
- May: 91.2 cm, between -2 and -1 SD
- About 10 times normal monthly growth

Assumptions (the dashboard gives no age or sex)

- Age: 36 months in Feb. Anganwadis serve under-6s and preschool starts at 3. At any age from 2 to 5, the same jump is 6 to 8 cm.
- Sex: girl, so the WHO girls table is used.

*Child dc795bf4, HAZ -2.87, -2.96, -3.06, -1.50 (no Jun or Jul readings). Source: WHO Child Growth Standards, height-for-age, girls 2 to 5 years.

Understanding (5) Borderline Clustering check

An AWC is flagged if more than 30% of its children fall in the borderline range on any one dimension (height-for-age, weight-for-age, or weight-for-height), on average across 6 months.

*This check monitors whether an unusually large share of children in an AWC are clustered in the borderline range i.e., recorded **just above** the cut-off for Moderate category (just above -2.0 Z-score) $\Rightarrow$ misreporting by a small margin of few cm/gm, could shift them into categories such as moderately wasted (MAM), stunted, and/or underweight*

Together, they create **AWC DQ scores** that can be downloaded

[illegible]

We can also rank districts to identify ‘hotspots’

Districts with high ‘Red’ burden	Total no. of AWCs	AWCs classified per Data Quality as		
		Green (0 flags)	Amber (≤30%)	Red (>30%)
Gajapati	2443	136 (5.6%)	1476 (60.4%)	831 (34.2%)
Rayagada	2087	98 (4.7%)	1364 (65.4%)	625 (30.0%)
Kalahandi	2377	166 (7.0%)	1524 (64.1%)	687 (28.9%)
